

The OPT tool separates the web joining the Blown Fibre Droptube (BFD) and copper element (containing a twisted pair) enabling the individual components to be terminated at both distribution pole and the customer’s premises

The interchangeable anodised tool cassettes and covers (label coloured blue for this variant) are attached to a universal handle mechanism. The handle locking mechanism ensures the tool remains closed during the sheath slitting operation. A wrist strap and user instructions are supplied with each tool.

Overall Dimensions (w x h x d) – 210 x 67 x 34mm (including cassette)

Part No.	Description	Information
OPT-T0162	ULW OH Sheath Splitter	Blue Label
