

## Fibre Locking Mechanism for Ultra-Lightweight Overhead Cables

The Fibre Locking Mechanism (FLM) is a locking mechanism essential for ‘loose’ jacketed element or elements in an overhead cable. The FLM provides an effective solution that isolates the termination of the fibres, either spliced or connectorised, in the fibre enclosure from the ‘in span’ environmental loading (ice and winding).

The FLM attaches to a wooden pole with 4 fixing screws. A number of FLMs can be fitted on a pole in line and is designed to form a ‘bridge’ over other cables fitted to a pole.

Overall Dimensions (w x h x d) – 100 x 215 x 75mm
