

The OPT stripper has a profiled cassette that slits the sheath on a 4/12f Overhead Dropcable Cable - 6mm diameter with a 2mm sheath wall thickness (typically as supplied by Prysmian). Each cassette contains a single rotatory blade which is located on the handle mechanism, as a pair the blades are diametrically opposite each other. These blades cut through the outer sheath to expose the cable element, ideally using the yellow stripe(s) as a guide to prevent the blades coming into contact with the strength members.

A profiled roller is located either side of the rotary blade to ensure the internal cable element is not damaged during the stripping operation. The handle locking mechanism ensures the stripper remains closed during the sheath stripping operation. A wrist strap and user instructions are supplied with each stripper.

Overall Dimensions (w x h x d) – 210 x 67 x 36mm (including cassette)

Part No.	Description	Information
OPT-T0159	4/12f ULW Cable Stripper	Red Label
